

## PRODUCT BRIEF

# Local DS-1 Service

## High-Performance Digital Local Trunking for the Large and Mid-Size Locations on Your AT&T Business Network

AT&T DS-1 Service on AT&T Business Network (ABN) supports company locations nationwide with full-featured and highly reliable local voice capabilities. This all-digital service connects your digital PBX directly to the AT&T Network via high-performance T1 facilities that are designed for locations with approximately 70 or more employees and that are continually monitored by AT&T. You receive high-quality, cost-effective local calling all through a single provider. And you can do it all with the added benefits of AT&T Business Network.

### Managing Network Services

Simplify the way you manage multiple business communication needs by integrating them on AT&T's industry leading ABN offer. By consolidating your Local, Long Distance, Data, IP, Wireless and Toll-Free Advanced Features on ABN, you can efficiently manage your network services while saving valuable time and money. With ABN, you can maximize the pricing and discounting by including all of your services under one umbrella contract, commitment and bill<sup>1</sup> while utilizing AT&T BusinessDirect<sup>®</sup>, to manage your services.

In addition to traditional ABN pricing, which provides you with automatic 'connected' pricing between AT&T facilities, ABN Advantage pricing option provides one, low monthly recurring charge for unlimited Local and LD/Intrastate capped usage. With several

terms and commitments to choose from and the ability to combine your network services, ABN is a powerful way to manage your business communication needs.

### Flexible, T1-Based Local Service

With AT&T DS-1 Digital Facilities, your digital PBX is connected directly to the AT&T Network over a digital T1.5 facility that provides 24 simultaneous voice paths. It supports inbound and outbound local calling, as well as full access to toll-free, long distance and international voice service.

### Your On-Network Solution, Nationwide

As the country's largest facilities-based CLEC, AT&T offers DS-1 Digital Facilities in 67 metropolitan service areas nationwide – allowing you to manage your enterprise-wide local services through AT&T.

If you equip all of your locations with access to the AT&T network – with AT&T DS-0 Service, AT&T DS-1 Service or AT&T DS-1 ISDN PRI Service, you'll gain significant pricing economies on your communications. That's because these calls receive the benefit from the lower Connected and Partially Connected rates for your local toll calls, long distance and wireline to wireless calls where included in ABN. It's the ideal way to extend the simplicity and efficiency of AT&T Business Network to your local calling, company-wide.

### Benefits

- A company-wide local solution through your AT&T Business Network
- Dependable, high-speed connections to the self-healing AT&T Network for local and long distance voice
- Typically, save 10% or more over similar services from incumbent local carriers
- AT&T Business Network discounts apply to all eligible local services usage
- With AT&T Local Service, more favorable 'connected' rates apply to local toll calls, long distance and qualified wireline to wireless calls

### Features

- Runs on dedicated digital T1
- Trunks available as DID, DOD, DID/DOD, and Combo
- 911 and X11 services
- Directory Listings
- Outbound and Inbound blocking options
- Online tools for analyzing trunk utilization

**Manage It All on AT&T BusinessDirect®**

Your AT&T DS-1 Digital Facilities service will be automatically incorporated into your secure AT&T BusinessDirect® portal<sup>1</sup>, which allows you to order local services, view your inventory of local services, view and pay monthly bills, and request maintenance service – all online, 24x7. It means simpler, more efficient networking, company-wide.

AT&T BusinessDirect® also provides an online Voice Trunk Utilization Summary that can help you determine most efficient trunk offers for your calling patterns. For more advanced management, there's an optional tool that allows you to monitor and control your trunk groups in real-time, to suit changing traffic conditions.

1. Wireless services are not currently available on AT&T BusinessDirect® and are currently billed separately.
